

When you want the very best in High Performance Cutting Tools, ask for QCT!

Quality Carbide Tool is more than the name of our company, it is the philosophy of how we design and manufacture our tools. All our products incorporate the disciplines of design, manufacturing and quality control. Every tool we design is developed on an advanced CAD system. The combined skills of our technicians and the most advanced CNC equipment available creates the finest high performance cutting tools available today. Integrated SPC programs are available at every work station and our quality control processes insure total adherence to print specifications, maintaining the very highest standards of quality.

Engineering

All QCT engineering is done in strict compliance with procedures established by our engineering department. With the aid of our advanced computer and CAD system, every operation is completely identified and detailed. Customer drawings are used only for reference.

Quality is Our First Name!

QCT uses the latest in quality control inspection machines, the Walters Helicheck, to ensure conformance to our customer specifications as well as our own rigid specifications. The machine is completely automatic and optically checks all attributes of our end mills, drills and reamers.
